## "Follow me! I just don't know where I am going..."

Don't worry anymore! Just follow the "blue" guidance. It shows you the heading and how far you are from the origin. And you can always zoom out the map and look for the origin icon. ⦿

| Origin | | |
|---|---|---|
| SSW | 3 min | 1.4mi |

---

## "Where are my minions? I meant, students/friends!"

When you click the START button, you can see pilots on the map:

For a detailed information about each pilot, just click the "Active" button (the one with a number 2, meaning 2 active pilots):

In the example above, John Doe is 0.1mi South of me, heading North, flying at 328ft high, 29mph fast. By the way, clicking a pilot's name will show you a line direct to him on the map.

---

## "Should I land into the wind or against it?"

You are covered too! The app estimates the wind direction based on your maximum speeds while flying. If you are below 80ft, the app changes its color to red if you are going tailwind, yellow if you are not perfectly aligned, and green if you are into the wind.

COMMUNICATION

## "Papa, I hate talking radio but I need to go home."

Your radio is not working (nothing new here, right?) or you are not "feeling" talking? Just click the "Returning to origin" button and everybody will receive an alert informing you are returning home.

SAFETY CLUES/COMMUNICATION

## "Another engine out… :("

My friend, you are in our prayers. While you are thinking "where am I getting more money to fix it?", just press the "Engine Out" button. All pilots around will receive an alert with your position. Clicking the alert will even, automatically, open (iPhone) Apple Maps or (Android) Google Maps, with directions to "your place".

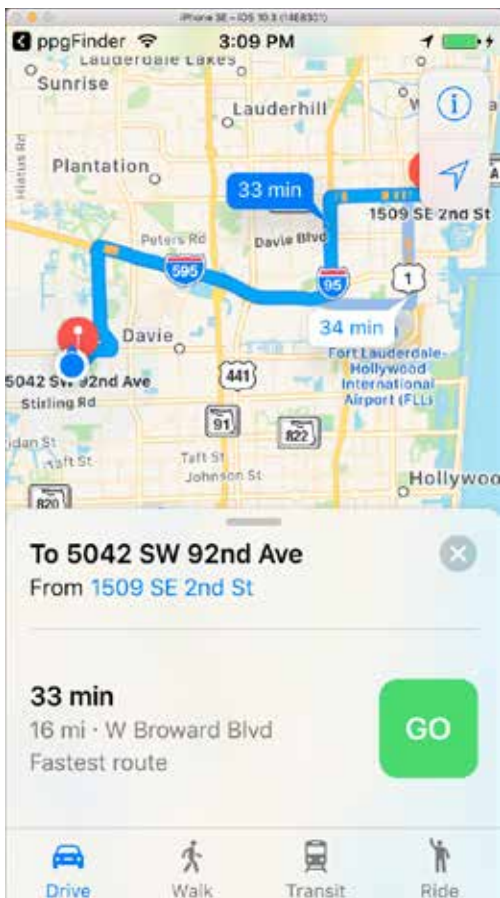

Just wait buddy. Somebody is coming to the rescue!

COMMUNICATION

## "May I smoke another cigarette before taking-off?"

Sure you can but… the app sends you alerts every time someone takes-off or land. So, beware you may be flying alone.

## CLOUD DATA
## "Oops! I can't show that flight because the data was in my other phone..."

*Papito*, all your flights "follow you", because they are saved in the cloud. Just log with your Facebook or email account in any device, and you will get your flight list.

## FLIGHT INFO
## "What about my performance?"

The competitor in you did great! Your stats are saved!

## FLIGHT PATH
## "I am a narcissist but my battery is draining fast... "

No prob, my beautiful friend. Turn your flight path ON/OFF while flying with just a click!

### ROUTE PLANNING

## "I'd go to the moon, if I knew how to get there!"

Well… Besides any place out of Earth, PPG Finder can help you to plan and share your routes with others. Before starting a flight, just click on the map to set waypoints. The app traces the route and calculate distances for you.
To share your planned route with others, just click the green cloud button. Everybody running the app will receive an alert to download it.
### FLIGHT INFO

## "How far from here is that place?"

While flying, just click the map and it will calculate the distance between your current point and the clicked spot.

### MULTI-LANGUAGE

## "Hablas Español?"

PPG Finder is currently available in English, Spanish and Brazilian Portuguese.

### SAFETY CLUES

## "Hey! $%#&@! You're too close! "

Get alerts when someone is flying too close of you.
